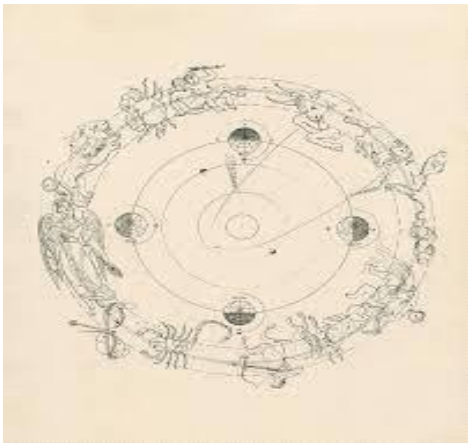
Time Device

14 July 2017 23:21



Does time travel relatively to peoples cognitions.

Do occurrences happen at different rates and if they happen separately does time change in a different way.

If an object meets its destination sooner than another can it change or alter the course of the previous object.

Does the world reality relate in different ways.

Is traveling 500 miles an hour enough to course a ripple. Like a bullet train through a tunnel.
